Staircase detail
This is a staircase of size $n = 4$:
#
##
###
####
Its base and height are both equal to n. It is drawn using # symbols and spaces. The last line is not preceded by any spaces.
Write a program that prints a staircase of size n.
Function Description
Complete the staircase function with the following parameter(s):
• int n: an integer
Print
Print a staircase as described above. No value should be returned.
Note: The last line is not preceded by spaces. All lines are right-aligned.
Input Format
A single integer, n, denoting the size of the staircase.
Constraints
$0 < n \leq 100$.
Sample Input
* The function accepts INTEGER n as parameter.
*/
void staircase(int n) {
for (int i = 1; i <= n; i++) {
// Print spaces
for (int j = 0; j < n - i; j++) {
printf(" ");
}
// Print hashes
for (int j = 0; j < i; j++) {
printf("#");
}
printf("\n");
}
}
int main()
{
int n = parse_int(ltrim(rtrim(readline())));

#####
######
Explanation
The staircase is right-aligned, composed of # symbols and spaces, and has a height and width of $n = 6$.
